

Configuring ShareX

Connecting ShareX to the image server is very simple.

After installing ShareX and having an account created for the Image server, you simply need to do the following:

1. Log into <https://images.potatosalad.party> with your image server account.
2. Click on your username in the top right and select profile.
3. Click the ShareX button to download the config.
4. Open the file that you just downloaded and click yes to connect ShareX to the server.

I highly recommend that in ShareX you set the default option to Save, Upload, and Copy URL. This will save a copy of your screenshots to your computer, upload a copy to the image server, and then put the URL on your clipboard. It's always good to save your images in multiple locations in case of drive failure.

To get the raw image instead of one embedded in the webpage do this:

1. Right click the ShareX tray icon and go to Destinations > Custom Uploader Settings
2. On the Bottom right, in the URL line add /raw to the end. It will look like {json:url}/raw

If you need help configuring ShareX or would like to request an account for the image server please contact me.
